

FurnitureLab™ POWER

FurnitureLab™ now offers combined power and USB charging units for our tables and booth seating. These units are commercial quality and are UL Listed. They come with 6' or 10' long cords that can be plugged in to the nearest outlet. See product details below.

Power for Tables

Our Globe Power Units are available in black, white, orange or green. Receptacles are set well above the table surface, abway from food and liquids. They have two 120 volt electrical outlets and a pair of USB chargers. These units are easy to assemble on site.

Black

White

Orange

Green

Placement of the units depends on the kind of support being used as well as the size of the top. If using our pedestal bases for rounds and squares, they must be offset from the center of the top. Consult your FurnitureLab account manager for recommended placement. We will supply a drawing to show the location of the unit on the top.

Table Bases

We recommend our Horizon and Metro Series bases as the columns can accommodate the power cord internally as shown below. These power units also work well with our Cantilever bases when adding power to a booth table.

If used with our Millennium Series table legs, the units can be placed anywhere on the top, but the cord will hang straight down, rather than hugging the base column.

Power for Booths

Our power receptacle units are available in Black, White and Silver finish. They are available with a standard double 120V outlet or a combination that includes a single 120V outlet and a pair of USB chargers. They can be placed in the front and/or on the sides of the booth in either the skirt (just under the seat) or the base as shown below. Power units come with a 10' cord and need an electrical outlet in close proximity.
