

# Booth Space Planning

The illustration below shows how all the different types of booths can work together in your dining area. This example uses 30" wide tops, a common size for most applications. The table top overhangs the front of the booth seat by 2". The depth of each of our booth models is detailed in the chart below. If you happen to specify a top with a different width, you would need to adjust the numbers below accordingly. The half-round and three-quarter round booths are standard in size.
